Assignment 6: Business Model Canvas & Customer Understanding

2. Empathy Map (Primary Segment: University Students)

Thinking & Feeling

- Frustrated* by the massive waste of time standing in lines.
- Anxious* about being late to the next lecture if they wait for food.
- Craving* a quick, reliable meal during their short 10-15 minute breaks.
- Relieved* when they can guarantee their food is ready.

Hearing

- Loud, noisy environments making communication with vendors difficult.
- Vendors shouting order numbers or mixing up verbal orders.
- Peers complaining: *"I'm going to skip lunch, the line is too long."*

Seeing

- Chaotic, crowded spaces in front of campus food kiosks.
- Fellow students looking stressed or checking their watches.
- No clear visual indication of how long the wait will actually be.

Saying & Doing

- Often skips meals entirely to avoid being late to class.
- Sometimes leaves the queue after 5 minutes of waiting.
- Scrutinizes cash and struggles to find exact change or small bills.

Thinking & Feeling

Seeing

Pains

Gains

- Missing lunch entirely.
- Arriving late to lectures.
- Receiving the wrong order due to miscommunication.
- Dealing with the hassle of cash and physical change.

- Gaining an extra 15 minutes to socialize or study.
 - A guaranteed hot meal between classes.
 - Seamless, modern payment experience.
-

3. Top 5 Key Assumptions to Validate

1. **Student Pre-Ordering Behavior:** Students are proactive enough to plan ahead and schedule their orders *before* their lecture ends, rather than relying on spontaneous ordering.
2. **Vendor Operational Compliance:** Vendors will actively use a digital dashboard (tablet/screen) and faithfully update order statuses (Received → Preparing → Ready) precisely during high-pressure peak rush hours.
3. **Digital Wallet Adoption:** Students will trust a closed-loop digital wallet and be willing to pre-load balances rather than relying solely on cash on delivery.
4. **Commission Acceptance:** A fixed per-order commission (e.g., 5 EGP) is acceptable to users without deterring them from using the platform daily.
5. **Accurate Time Estimation:** The system can accurately predict food preparation times despite fluctuating vendor loads, ensuring the food is hot exactly when the student arrives.
