Assignment 7

Dalla3 Kershak University Food Application

Team:

Ebrahim Yussif Ebrahim | C4 | 692400174

Ahmed Mohamed Refaat | C2 | 692400154

Fady Fouad Milad | C3 | 692400508

Noura Maher Mohamed | C3 | 692400276

Ferial Mohamed Saad | C4 | 692400369

Noha Mohamed Hamdi | C3 | 692400012

Ahmed Yousry Tagelmoulok | C3 | 692400615

Seif Eldin Mohamed | D1 | 692400535

Ahmed Said Abdelhaseb | C4 | 692400495

Mohammed Walid | A3 | 692400507

Ali Fahmi Abolela | B1 | 692400782

Assignment 7: Hypothesis Testing & MVP Design

1. The Top 3 Most Critical Risky Assumptions

We have isolated the top 3 assumptions that, if proven false, would cause the Dalla3 Kershak business model to fail.

1. **Vendor Operational Compliance** (If vendors ignore the tablet during a rush, students will arrive, the food won't be ready, and trust in the app is destroyed).
 2. **Student Pre-Ordering Behavior** (If students refuse to use an app and prefer walking up to the counter instinctively, there is no demand).
 3. **Closed-Loop Wallet Pre-loading** (If students refuse to pre-load money into the app, the transaction friction remains too high).
-

2. Hypotheses, MVP Designs, and Success Metrics

Test 1: Vendor Operational Compliance

- **Hypothesis:** If we provide a fast-paced campus vendor with a simplified digital interface (only "Accept" and "Ready" buttons), they will update the status of at least 85% of digital orders without manual intervention during the peak rush hour (12:00 PM - 2:00 PM).
 - **MVP Design (Concierge / Shadow Testing):**
Equip one anchor vendor with a basic tablet displaying a simplified order queue (no backend required, can be a simple web view or mocked UI). A team member stands beside the vendor during rush hour to observe. We send test orders to the screen. We watch to see if the vendor interacts with the tablet naturally or if they ignore it / require the team member to tap the buttons for them.
 - **Measurable Success Metrics:**
 - Percentage (%) of orders updated correctly by the vendor staff alone.
 - Number of times the vendor complains about the tablet being a distraction.
-

Test 2: Student Pre-Ordering Behavior

- **Hypothesis:** If provided with a digital menu link, at least 20% of a specific cafeteria's daily customers will choose to pre-order an hour in advance rather than waiting in the physical queue.
 - **MVP Design (WhatsApp Bot / Landing Page):**
Generate a QR code linked to a simple Google Form or a WhatsApp Business number. Distribute the QR code on flyers handed to students standing in the long queue of a specific vendor. The flyer says: *"Skip this line tomorrow. Scan to pre-order."* Orders are received on WhatsApp by the team, who manually relay them to the vendor.
 - **Measurable Success Metrics:**
 - Number of WhatsApp pre-orders received per day.
 - Conversion rate: (Number of pre-orders) / (Number of flyers handed out).
 - Repeat usage: Percentage of students who order via WhatsApp more than once in a week.
-

Test 3: Closed-Loop Wallet Pre-loading

- **Hypothesis:** If we offer a 10% credit bonus, at least 30% of our early-adopter students will be willing to deposit an initial sum of 50 EGP cash into our digital platform to use for future orders.
- **MVP Design (Physical Booth & Ledger):**
Set up a physical "Dalla3 Kershak" activation booth on campus. We offer students a deal: Give us 50 EGP in cash now, and we will give you 55 EGP in "Digital Credit" to use for their WhatsApp pre-orders (from Test 2). We manually track the balances on an Excel Spreadsheet.
- **Measurable Success Metrics:**
 - Total number of students who agree to deposit funds.
 - Average initial deposit amount.
 - Qualitative feedback on why students who refused chose not to deposit (e.g., lack of trust, don't have enough cash on hand).
