1. Planning and Requirements

1.1 Project Objectives

The main objective of the **Dalla3 Kershak** project is to develop a comprehensive, platform-independent application that connects university students, academic staff, and on-campus food service providers.

The core mission is to:

- Eliminate long queues
 - Reduce order errors
 - Optimize the limited time between lectures
-

1.2 Target Audience

The application targets three main groups:

- **Primary Users:**
University students who need a fast and efficient way to order food
 - **Secondary Users:**
Academic staff and employees (Professors, TAs, administrators)
 - **Service Providers:**
Campus restaurants and cafeterias that face operational pressure and lack digital systems
-

1.3 Core Needs and Problem Statement

The current food ordering system suffers from:

1. **Time inefficiency:**
Students waste time waiting or arrive late to lectures
 2. **Operational pressure:**
Leads to order mistakes and poor service quality
 3. **Lack of digital system:**
Limits efficiency and reduces potential revenue
-

1.4 Strategic Motivation

The project is built to solve a real problem (time loss) while creating a scalable and profitable system.

It focuses on:

- Strong system architecture
 - Smooth user experience
 - High-level security
-

2. Design and Development

2.1 System Vision

The platform aims to create a **digital food court** that brings all restaurants together in one place.

This provides:

- First-mover advantage
 - Strong market control within the university
-

2.2 Key Features

- Centralized restaurant platform
 - Scheduled ordering system
 - Real-time notifications
 - Digital wallet
 - Restaurant dashboard
 - Loyalty and reward system
-

2.3 System Architecture

The system is built using:

- **Frontend:** React
 - **Backend:** Node.js
 - **Database:** Flexible system
-

3. User Interface

3.1 Design Principles

The UI focuses on:

- Simplicity
 - Ease of use
 - Modern design
 - Reducing user effort
-

3.2 Responsiveness

The platform:

- Is fully responsive
 - Works on mobile and desktop
 - Uses a mobile-first approach
-

3.3 Interface Components

The interface includes:

1. **Discovery Page:**
Browse and search restaurants
2. **Restaurant Dashboard:**
Manage orders
3. **Order Flow:**
Place orders and set pickup time

4. System Concept

4.1 Workflow

1. User opens the website
 2. Selects a restaurant
 3. Chooses items
 4. Pays online
 5. Restaurant receives the order
 6. Order is prepared
 7. User receives notification
 8. User picks up the order without waiting
-

4.2 Revenue Model

- 5 EGP commission per order
 - Optional restaurant advertisements
-

5. Implementation and Market Strategy

5.1 Challenges

- Convincing restaurants
 - Lack of experience
 - Limited funding
-

5.2 Solution

- Use cost-efficient technologies (React & Node.js)
 - Market through social media
 - Start small, then scale
-

5.3 Market Fit

The system improves based on:

- Number of users
 - Order speed
 - User engagement
-

6. Phase 1 Development Timeline

Since the frontend is already completed, this phase focuses on backend and integration.

Week 1: Architecture & Database

Objective: Build the foundation

Tasks:

- Choose database
 - Design schemas
 - Setup server
 - Configure security
-

Week 2: Backend Development

Objective: Build core system

Tasks:

- Authentication system
 - Restaurant APIs
 - Order system
 - Queue system
 - Wallet system
-

Week 3: Integration

Objective: Connect frontend and backend

Tasks:

- Connect React with APIs
 - Implement order tracking
 - Connect restaurant dashboard
 - Manage application state
-

Week 4: Testing & Optimization

Objective: Ensure system quality

Tasks:

- Full system testing
- Load testing
- Fix bugs
- Final deployment
